

Net2Printer User Benefits

1	Cost savings	Net2Printer is less expensive than alternative means of document delivery compared to postal service, courier, fax, Internet Printing Protocol, etc.
2	Immediate real-time document delivery	Net2Printer is the fastest means possible to deliver a document from sender to recipient. All time-sensitive personal and business correspondence is delivered in a peer-to-peer environment eliminating all intermediate steps in the delivery and distribution chain.
3	Original-quality printing	Net2Printer documents are sent directly from the sender's computer to the recipient's printer and print at the resolution and with the same features as an original first-generation document, as if the recipient printed the document themselves.
4	Elimination of compatibility issues	<p>Net2Printer documents use a universal printer file format. There are no software, font, nor printer-driver compatibility issues encountered when printing using Net2Printer. Net2Printer eliminates the need for the sender and recipient to have the same software application(s) on their computers in order to open and print document files.</p> <p>For example, customers with specialized software (such as Visio®, CorelDraw®, AutoCAD®, etc.) used to run their business (attorneys, engineers, brokers, etc.) may use Net2Printer to send documents directly from these specialized applications to their customers' printers ensuring that the document is delivered and printed as intended by the sender.</p>
5	No manual intervention by recipient	The Net2Printer solution allows documents to be printed remotely without any intervention by the recipient. This opens the door to a universe of business-applications that may be created using the Net2Printer technology. Mutual consent properties are utilized by Net2Printer to ensure that "spam", "junk" and "bulk" mail printing may be blocked by the recipient.
6	Non-editable universal file format	Net2Printer automatically generates a full-color document image from within the sender's application using only the PRINT command when sending a document. Upon delivery, the Net2Printer document is not editable by the recipient ensuring that the sender's content is printed as intended eliminating the risk of unauthorized modification.
7	Easy access to documents	Senders are able to deliver documents of any complexity to recipients without burdening the recipient with technical issues. For example, using Net2Printer a grandparent can receive pictures of their children and grandchildren—printed directly to their printer—without ever accessing their computer. Net2Printer eliminates the need for recipients to interact with their computers thereby turning the recipient's printer into their mailbox.
8	File transfer feature	Outlook, and other Email programs, place limitations upon the size of files that may be attached to Email messages. Emails may be blocked due to excessive file size, (as with Hotmail, Yahoo, Netzero etc.) or stripped of attachment content depending upon the nature of the attached files. Net2Printer's peer-to-peer file transfer features allows users to overcome both of these Email limitations.
